Obisike Izima *Full Stack Developer*

✉ kingsleyizima@gmail.com 🔗 Portfolio in Linkedin ○ Github

🪪 PROFILE

With 3 years of experience in full stack development, I have expertise in React.js, React Native, Express.js and MongoDB. Spearheaded the development and deployment of a location-based web platform, reducing load time by 30% through performance optimization.

💼 WORK EXPERIENCE

08/2025 – 09/2025
Remote

Backend Developer Contractor, *Resilience 17*
- Helped in building a fintech API for sending money across different currencies
- Built the API for creating accounts with foreign account provider services
- Setup email templating for sending different emails to users

05/2024 – 12/2024
Remote

Full Stack Software Developer, *Travaye NG*
- Spearheaded the development of a location-based web platform, enhancing user engagement by 10% through the integration of React.js and TailwindCSS within 3 months.
- Developed full and integrated RESTful APIs with Express.js and MongoDB, enhancing data management efficiency.
- Reduced load time by 30% through performance optimization.

01/2024 – 04/2024
Remote

Full Stack Developer, *Enover Labs*
- Built full-stack features for an internal dashboard with React, TypeScript, Express.js, and MongoDB
- Developed and secured authentication flows using JWT and RESTful endpoints
- Improved user navigation, reducing support queries by 30%
- Participated in daily stand-ups, peer code reviews, and agile development cycles

---

🧠 SKILLS

Frontend: Next.js │ React.js │ React Native │ Redux Toolkit │ TailwindCSS

Backend: Express.js │ Node.js

Databases: Firebase │ MongoDB │ Supabase

Version Control: Git │ GitHub

Deployment: Netlify │ Vercel

Testing & CI/CD: Jest │ React Testing Library

Other Tools: Vite │ Webpack

Concepts: Accessibility │ Agile/Scrum │ Performance Optimization │ Responsive Design

---

📁 PROJECTS

09/2024 – 12/2024

Travaye NG
Spearheaded the development of a location-based web platform, enhancing user engagement by 10% through the integration of React.js, Next.js, and TailwindCSS within months.

Real-time Chat App
- Full-stack application built with React, Express, MongoDB, and Socket.IO
- Enabled real-time messaging with typing indicators and notification features

Music Streaming Interface
- Built a streaming interface using React and JavaScript
- Integrated third-party music APIs and created playlist management functionality
